tool.

AIM:

To analyse the performance and usage statistics of a web server using the Webalizer log analysis tool.

ALGORITHM:-

Start the system and install the Webalizer tool.

Obtain the Web Server access log file such as Apaches' access log.

Run Webalizer to process the web server log.

Webalizer read and analyses the HTTP request records.

Total Visits

No. of requests

No. of pages

No. of files

Total data transferred

Unique visitors

Most frequently accessed URLS

Generate the HTML report.

Analyse the statistics and determine the server usage and importance.

Stop the program.

PROCEDURE:

Webalizer is a log-analysis tool, so the practical implementation consists of configuring and executing Webalizer with the writing of conventional program.

Step 1: Install Webalizer

For Ubuntu/Linux:

Sudo apt update

Sudo apt install webalizer

Step 2: Create Webalizer configuration.

Example configuration:

logFile /var/log/apache2/access.log

outputDir /var/www/html/webalizer

HostName localhost

dns_cache.db

Incremental yes

PageType htm*

PageType cgi

Page type php

Page type asp

Page type jsp

Step 3: Run webalizer

Sudo webalizer -c /etc/webalizer/webalizer.conf

Step 4: View the report

The generated report can be opened in a web browser.

http://localhost/webalizer/

The report contains graphical and tabular information about web.

Sample Output:

A typical webalizer report may display:

Summary by Month

Month	Visits	Pages	Files	Hits	KBytes
Jan	2026	1250	3420	5210	7345
45820					
Feb	2026	1480	3915	5740	8120
52140					
May	2026	1635	4250	6210	
8950	58760				
Total	4365	11585	17160	24415	
156720					

Top URLs :-

1. /index.html
2. /about.html
3. /products.html
4. /contact.html
5. /login.html

Response codes :-

200	OK	21500
301	Moved permanently	850
404	Not found	1200
500	Server Error	15

RESULT :-

Thus, the webalizer tool was successfully used to analyse web server log files. The generated report provides useful information such as number of visitors, requests, Pages Viewed, files accessed, bandwidth usage, popular URLs, response codes, browsers, and operating system which helps in evaluating Web Server usage and performance.
