UNDERSTANDING THE CISCO PACKET TRACER ENVIRONMENT

AIM :-

To understand the cisco packet tracer environment and design a simple computer network using its interface and networking components.

STEPS :-

- Open the Cisco packet tracer application.
- Observe the user interface, including the menu Bar, Main Toolbar, Workspace, Common tools Bar, Network component Box, and Realtime / Simulation tabs.
- From the Network compent Box, select the required network devices such as PCs, Hub and switch.
- Drag and drop the device into the workspace.
- Connect the device using copper straigh - Through cables.
- Configure IP address for the PCs using the Desktop-IP configuration option.
- Verify that all links are active (green LED)
- Use the add Simple PDU tools to send a packet between two PCs.
- Observe packet transmission in Realtime mode and Simulation mode.

- Save the network topology .

RESULT :-

The Cisco Packet Tracer environment was Successfully explored, and a simple network was designed - The interface components, device connections, IP configuration, and packet transmission were successfully understood using both Realtime and Simulation
